Hierarchical Listing With Definitions 1

Volume 2 • Rotated Term Display

Introduction

The *NASA Thesaurus* contains the authorized subject terms by which the documents in the NASA STI Databases are indexed and retrieved. The *NASA Thesaurus* comprises two volumes: *Volume 1 – Hierarchical Listing With Definitions* and *Volume 2 – Rotated Term Display.*

The *Hierarchical Listing With Definitions* contains all subject terms and USE cross references currently approved for use, and displays the full hierarchical structure for each term. New with the 1998 edition, is the inclusion of term definitions previously contained in a separate volume of the *NASA Thesaurus* (Volume 3). In addition, the new listing has been developed to serve as an orthographic authority for upper/lowercase forms of all terms and cross references. A ***term-added date***, displayed for all terms added after April 1988, is also new in this edition. The listing includes terms appearing in the *NASA Thesaurus, Preliminary Edition* (December 1967), the *NASA Thesaurus Alphabetical Update* (September 1971), the *NASA Thesaurus* (1982, 1985, 1988, and 1994 editions), and other terms approved for use through the first of December 1997. Over 17,700 terms, 3,832 definitions, and approximately 4,000 USE references are contained in the *Hierarchical Listing With Definitions*.

The *Rotated Term Display* is a ready-reference tool which provides thousands of additional 'access points' to the thesaurus terminology. It contains the postable terms and nonpostable terms found in the *Hierarchical Listing* arranged in a KWIC (key-word-in-context) index. It is a useful companion to the *Volume 1* listing, containing more than 21,000 entries.

The *NASA Thesaurus* is updated by the *NASA Thesaurus Supplement* until a new edition is issued. The *NASA Thesaurus Supplement* is cumulative and is published semiannually in March and September. It includes complete hierarchies for all new terms, definitions when available, and the *Rotated Term Display.* A listing of term deletions and changes is also included. Suggestions for term modification, deletion, and addition should be addressed to:

The terminology of the *NASA Thesaurus* is based in large part on the actual indexing vocabulary developed by NASA during the 1960's. Other thesauri, notably the DOD *Thesaurus of Engineering and Scientific Terms* (AD-672000), have provided additional candidate terms. The general guidelines for the initial creation of the *NASA Thesaurus* were based on the COSATI *Guidelines for the Development of Information Retrieval Thesauri* (1 September 1967). Continuing development of the *NASA Thesaurus* conforms to the thesaurus standard of the National Information Standards Organization (*Guidelines for the Construction, Format, and Management of Monolingual Thesauri*, ANSI/NISO Z39.19-1993).

Nomenclature and Conventions

Postable Terms. Subject terms that have been approved for use in indexing, and thus can be 'posted.' In *Volume 1*, postable terms are shown in non-italic type.

Nonpostable Terms. Terms that are included for cross reference information and cannot be used for indexing. In *Volume 1*, nonpostable terms are set in italics.

Term Selection. Subject terms have been chosen on the basis of their significance and use in aerospace literature and their effectiveness in representing productive retrieval concepts. Particular consideration has been given to frequency of use in earlier NASA indexing and search vocabularies, to relationships with other terms in the vocabulary, and to precise scientific and technical usage.

Noun Usage. In general, subject terms are presented in the noun form.

Singular vs. Plural. The plural form has, in general, been used for subject terms. The singular form, however, is employed for non-count nouns (such as *snow*), terms that refer to unique entities such as *Mariner 10 Space Probe*, and terms related to specific processes, properties, and conditions.

Term Length. No more than 42 characters, including spaces, are used for any subject term. Various words in longer terms are sometimes truncated. Full expanded forms of such truncated terms are generally included in the scope notes.

Term Ambiguity. When subject terms have more than one meaning in aerospace usage, or where distinction between terms must be made, clarification is provided in one of two ways:

a) Parenthetical qualifying expressions or glosses are added, becoming part of the subject term. For example:

sizing (shaping)
sizing (surface treatment)

b) Scope notes are also added for explanation or definition; they do not become part of the subject term. For example:

rotational states
SN (LIMITED TO MOLECULAR ENERGY LEVELS — EXCLUDES ROTATIONAL DYNAMICS OF VEHICLES OR OTHER BODIES)

Word Order. Subject terms that consist of more than one word are listed in *direct order*, i.e., in their natural word order rather than in an inverted form. (The *Rotated Term Display* can be used to access terms by embedded words.)

Abbreviations and Acronyms. Abbreviations and acronyms that are in common usage in the aerospace and general engineering communities are employed for some postable terms in this thesaurus. In most cases, USE cross references are made from the unabbreviated forms. For example:

Orbiting Solar Observatory
USE **OSO**

Synonyms. When candidate subject terms are true synonyms, one is chosen to be the valid, or postable term, and the other is provided with a USE cross reference. For example:

columbium
USE **niobium**

niobium
UF *columbium*

Array Terms. Subject terms with meanings either too broad or ambiguous for effective indexing or retrieval of information, have been designated array terms and carry the following scope note (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE TERMS LISTED BELOW). Relationships with other postable terms are shown by the Related Term (RT) reference only. For example:

∞ **beams**
SN (USE OF A MORE SPECIFIC TERM IS RECOMMENDED — CONSULT THE TERMS LISTED BELOW)
RT beams (radiation)
beams (supports)

An infinity symbol (∞) precedes an array term in each of its appearances in *Volume 1*.

Identifiers. In the *NASA Thesaurus*, identifiers (i.e., terms that designate unique entities) are treated as regular terms and are provided complete cross references. Most identifiers are proper nouns and many include a numeric or alphabetic designation for a particular model or item. As a general rule, identifiers are added to the Thesaurus only if they have an important relation to the aerospace sciences.

Cross Reference Structure

Cross reference relationships in the *Hierarchical Listing With Definitions* are shown as follows:

Cross References	Notation
Broader Term	GS
Narrower Term	GS
Related Term	RT
Use	USE
Used For	UF

These cross references have the following applications:

Broader Term. This reference indicates that the term represents a more inclusive concept. In the Generic Structure (GS), the broader terms appear above and to the left of the term referenced. For example:

reentry communication
GS telecommunication
. space communication
. . spacecraft communication
. . . **reentry communication**

The terms *telecommunication*, *space communication*, and *spacecraft communication* are broader terms to *reentry communication*.

Narrower Term. This reference indicates that the term represents a more specific concept. In the Generic Structure (GS), the narrower terms appear below and to the right (indented) of the term referenced. For example:

GS **scanners**
. Coastal Zone Color Scanner
. horizon scanners
. infrared scanners
. ocean color scanner
. optical scanners
. . flying spot scanners
. . multispectral band scanners
. . . Thematic Mappers (Landsat)
. ultrasonic scanners

The terms *Coastal Zone Color Scanner, horizon scanners, infrared scanners, ocean color scanners, optical scanners,* and *ultrasonic scanners* are narrower terms to *scanners*. The terms *flying spot scanners, multispectral band scanners,* and *Thematic Mappers (Landsat)* are narrower to both *optical scanners* and *scanners.*

The number of narrower terms is not limited. For example, *artificial satellites* has nearly 500 narrower terms.

Related Terms (RT). This reference indicates that the two terms are conceptually associated, but not equivalent or generically related. The RT relationship is reciprocal, as illustrated in the following example:

radar equipment
RT radio equipment

radio equipment
RT radar equipment

Use (USE). This reference indicates that the listed term is not 'postable,' i.e., not a valid term, and that the term or terms adjacent to the USE indicator should be used instead. Note that all nonpostable terms are set in italics. For example:

jet airstreams
USE **jet streams (meteorology)**

Used For (UF). This relation is the reciprocal of the USE cross reference and indicates that the term listed above the UF indicator is a valid or 'postable' term, and term or terms adjacent to the UF indicator are nonpostable. For example:

jet streams (meteorology)
UF *jet airstreams*

Filing Order

The ordering of subject terms into an alphabetical arrangement can be accomplished in several ways. The most commonly used methods are the letter-by-letter, word-by-word, and the computer sorting order. In the absence of any universal agreement on a standardized approach, a word-oriented modification of the computer sorting technique has been adopted in this thesaurus.

A special feature has been added to this technique to sort numeric designations in natural ascending order. Non-alphanumeric characters contained within terms are sorted prior to alphanumeric characters. In Volume 2, non-alphanumerics are ignored altogether for the general KWIC sort. Thus, embedded parentheses are filed before the alphabet in Volume 1, but are ignored for filing in Volume 2. Hyphens, slashes and periods follow blank spaces.

Retrospective Indexing

Between 1984 and 1993, all terms added to the *NASA Thesaurus* were retrospectively assigned to past database records using a method that combined advanced search strategies and manual review. Most of the terms for which this procedure was carried out can be identified by checking the *term-added date* that appears directly below the term in Volume 1. Term-added dates are provided for all terms added to the *NASA Thesaurus* after April 1988.

Thesaurus Term Definitions

New with this 1998 edition is the inclusion of term definitions previously contained in a separate volume of the *NASA Thesaurus* (Volume 3).

Definitions are given for most terms added since 1976 as well as for many earlier terms. Definitions of more common or general scientific terms are given a NASA slant if one exists. Certain

terms are not defined as a matter of policy: common place names, chemical elements, specific models of computers, and non-technical terms. Other terms lack definitions because the *NASA Thesaurus* predates by a number of years the systematic effort to define terms. Nevertheless, definitions of older terms are continually being added.

Many of the definitions contained in the *Thesaurus* were constructed by lexicographers at the NASA Center for AeroSpace Information, who rely on the following sources for their information: experts in the field, literature searches from the NASA STI Databases, and specialized references. Other definitions were obtained from the following sources:

AGI. *Glossary of Geology*, 3rd edition. Alexandria, VA, American Geological Institute, 1987.

ASTM. *Compilation of ASTM Standard Definitions*, 6th edition. Philadelphia, PA, ASTM, 1986. Copyright, the American Society for Testing and Materials (ASTM). All rights reserved. Used with the permission of ASTM. The original definitions appeared in the *Annual Book of ASTM Standards*.

DOE. *Energy Data Base Subject Thesaurus* (DOE/TIC-7000-R7). Oak Ridge, TN, Department of Energy, 1987.

IEEE. *Standard Dictionary of Electrical and Electronics Terms*, Fourth ed., New York, NY, IEEE, 1988.

SP-7. *Dictionary of Technical Terms for Aerospace Use*, NASA SP-7. Washington, DC, NASA, 1965.

In some cases, definitions from these sources have been subjected to minor editorial alterations; for example, to make a definition agree in number with the NASA form of the term.

antisite defects
(added July 1997)
DEF Point defects occurring in crystalline compounds where an atom of one atomic species occupies an atomic site that is allocated to a different atomic species (e.g., in GaAs, an arsenic atom may sit on a site allocated to a gallium atom). If the nearest neighbor sites are occupied with the correct species for their sites (e.g., an arsenic antisite atom surrounded by arsenic atoms), the antisite atom is then bonded to four like atoms (rather than four Ga atoms). Such a configuration is not electrically neutral, but acts as a double donor. An "antisite pair" occurs if two adjacent atoms have simply been interchanged.

archaebacteria
DEF Organisms belonging to the taxonomic kingdom of the same name which are characterized by distinct t- and r-RNAs, the absence of peptoglycan cell walls and their possible replacement by a proteinaceous coat, ether-linked lipids from phytanyl chains, and occurrence in unusually harsh habitats, e.g., methane, halide and thermoacidic environments. Auger effect
DEF The nonradiative transition of an atom from an excited electronic energy state to a lower state with the emission of an electron. The term usually refers to the x ray region of energy states. The final state corresponds to one higher degree of ionization than does the initial state. The effect is an alternative process to the transition to a lower state having the same degree of ionization with the emission of an x ray photon, and thus is analogous to the internal conversion of a nuclear transmission.

badlands
DEF Intricately stream-dissected topography, characterized by a very fine drainage network with high drainage densities (77 to 747 miles per square mile) and short steep slopes with narrow interfluves. Badlands develop on the surface with little or no vegetative cover, overlying unconsolidated or poorly cemented clays or silts, sometimes with soluble minerals such as gypsum or halite. They may also be induced in humid areas by removal of the vegetative cover through overgrazing, or by air pollution from sulfide smelting. capacitance
DEF That property of a system of conductors and dielectrics which permits the storage of electrically separated charges when potential differences exist between the conductors. It is the ratio of a quantity, Q, of electricity to a potential difference, V. A capacitance value is always positive. The units are farads when the charge is expressed in coulombs and the potential in volts: C = Q/V. Capacitance is symbolized as C.

chemical energy
DEF Energy produced or absorbed in the process of a chemical reaction. In any such a reaction, energy losses or gains usually involve only the outermost electrons of the atoms or ions of the system undergoing change; here a chemical bond of some type is established or broken without disrupting the original atomic or ionic identities of the constituents.

Clementine spacecraft
(added May 1997)
DEF A spacecraft launched in January 1994 as part of a joint NASA/DoD-BMDO (Ballistic Missile Defense Organization) mission to space-qualify several lightweight electronic instruments and systems (including an ultraviolet/visible CCD camera, a near infrared and long-wavelength infrared camera, and a combined high-resolution CCD camera and laser ranging system). The Clementine mission also provided the first complete systematic surface mapping of the moon from the ultraviolet to near infrared spectral regions. A software malfunction in May of 1994 precluded a planned flyby of the asteroid Geographos.+

cluster variation method
(added July 1997)
DEF An exact, statistical-mechanical technique for approximating the configurational entropy of a crystalline material, such as an alloy. The method is based on the cluster-cumulant expansion of entropy, that involves the expansion of the thermodynamic quantities of an infinite system in terms of the density matrices of finite groups of lattice sites called clusters. The method, first proposed by Kikuchi, was developed as a theoretical tool for dealing with atomic ordering.

DAST program
SN (DRONES FOR AERODYNAMIC AND STRUCTURAL TESTING)
DEF A NASA program which uses the Firebee 2 target drone aircraft as a test bed for getting flight data on research wings. The drone is launched from the wing of a B52 and recovered by parachute. The program's purpose is the study of flight loads and load control. Used for drones for aerodynamic and struct test.

F region
- SN (ALTITUDES ABOVE APPROXIMATELY 140 km)

geology
DEF The study of the planet Earth—the materials of which it is made, the processes that act on these materials, the products formed, and the history of the planet and its life forms since its origin. Geology considers the physical forces that act on the Earth, the chemistry of its constituent materials, and the biology of its past inhabitants as revealed by fossils. Clues on the origin of the planet are sought in a study of the Moon and other extraterrestrial bodies. The knowledge thus obtained is placed in the service of man—to aid in the discovery of minerals and fuels of value in the Earth's crust, to identify geologically stable sites for major structures, and to provide foreknowledge of some of the dangers associated with the mobile forces in a dynamic Earth.

geophysics
DEF The physics of the Earth and its environment, i.e., Earth, air, and (by extension) space. Classically, geophysics is concerned with the nature of and physical occurrences at and below the surface of the Earth including, therefore, geology, oceanography, geodesy, seismology, and hydrology. The trend is to extend the scope of geophysics to include meteorology, geomagnetism, astrophysics, and other sciences concerned with the physical nature of the universe.

gyres
DEF Closed circulatory systems in a body of water, larger than an eddy or a whirlpool. There is a circular motion of water in each of the major ocean basins, centered on a subtropical high-pressure region. These movements are generated by connective flow of warm surface water poleward, by the deflective effect of the Earth's rotation and by the effects of prevailing winds. The water within each gyre turns clockwise in the Northern Hemisphere and counterclockwise in the Southern Hemisphere. Acceleration causes sea level to fall along mainland coasts; deceleration leads to rise.

high electron mobility transistors
(added November 1992)
DEF A recently developed field effect transistor based on the technique of modulation doping of GaAs/Al(x)Ga(1-x) as heterojunctions. This technique achieves high mobility in part by introducing carriers into high purity GaAs from donor ions in an adjacent AlGaAs layer, the electrons and ions being separated by the built-in heterojunction potential. oxygen
pressure
spacecraft cabin atmospheres

high Q
USE **Q factors**

∞ **high resistance**
SN (USE OF A MORE SPECIFIC TERM IS RECOMMENDED—CONSULT THE TERMS LISTED BELOW)
RT chemical properties
electrical resistance
flow resistance
mechanical properties
∞ physical properties
∞ resistance
ruggedness
thermal resistance

high resolution
GS resolution
. **high resolution**
RT accuracy
angular resolution
high definition television
precision
spatial resolution

high resolution coverage antennas
UF *HICAT (radar technique)*
HICAT project
GS antennas
. **high resolution coverage antennas**
RT radar antennas
radar resolution
resolution

high Reynolds number
SN (RN ABOVE 3,000)
DEF A Reynolds number above the critical Reynolds number of a sphere.
GS dimensionless numbers
. Reynolds number
. . **high Reynolds number**
ratios
. Reynolds number
. . **high Reynolds number**
RT low Reynolds number

high speed
UF *high speed flight*
GS rates (per time)
. **high speed**
velocity
. **high speed**
RT airspeed
escape velocity
ground speed
hypersonic speed
landing speed
light speed
relativistic velocity
rotor speed
supersonic speed

high speed cameras
GS optical equipment
. cameras
. . **high speed cameras**
. . . framing cameras
photographic equipment
. cameras
. . **high speed cameras**
. . . framing cameras
RT ballistic cameras
frame photography
high speed photography
rotating mirrors
streak photography
stroboscopes

high speed flight
USE **flight**
high speed

high speed photography
GS imagery
. photography
. . **high speed photography**
RT high speed cameras
photographic recording

high speed transportation
USE **rapid transit systems**

high strength
GS mechanical properties
. **high strength**
RT compressive strength
shear strength
∞ strength
tensile strength
tensile stress
yield strength

high strength alloys
GS alloys
. **high strength alloys**
. . Astroloy (trademark)
. . high strength steels
. . . maraging steels
RT aluminum–lithium alloys
tensile properties

high strength steels
UF *low alloy steels*
GS alloys
. high strength alloys
. . **high strength steels**
. . . maraging steels
. iron alloys
. . **steels**
. . . **high strength steels**
. . . . maraging steels
RT carbon steels

high temperature
GS temperature
. **high temperature**
RT sialon
temperature measurement

high temperature air
UF *hot air*
GS gases
. gas mixtures
. . air
. . . **high temperature air**
. high temperature gases
. . **high temperature air**
high temperature fluids
. high temperature gases
. . **high temperature air**
mixtures
. solutions
. . gas mixtures
. . . air
. . . . **high temperature air**

high temperature alloys
USE **heat resistant alloys**

high temperature environments
GS environments
. **high temperature environments**
RT dry heat
heat acclimatization
lunar temperature
thermal environments
thermal fatigue

high temperature fatigue
USE **thermal fatigue**

high temperature fluids
GS **high temperature fluids**
. high temperature gases
. . high temperature air
RT∞ fluids
hydraulic fluids
plasmas (physics)
working fluids

high temperature gas cooled reactors
UF *HTGR*
GS nuclear reactors

. gas cooled reactors
. . high temperature nuclear reactors
. . . **high temperature gas cooled reactors**
. nuclear research and test reactors
. . high temperature nuclear reactors
. . . **high temperature gas cooled reactors**
RT nuclear power reactors

high temperature gases
UF *hot gas systems*
hot gases
hot jet exhaust
GS **gases**
. **high temperature gases**
. . high temperature air
high temperature fluids
. **high temperature gases**
. . high temperature air
RT combustion products
exhaust emission
ionized gases
pneumatic probes
rarefied gases
shock wave propagation

high temperature lubricants
GS lubricants
. **high temperature lubricants**
RT gas bearings
gas lubricants
thermal resistance

high temperature materials
USE **refractory materials**

high temperature nuclear reactors
UF *Los Alamos Turret Reactor*
UHTREX (nuclear reactors)
GS nuclear reactors
. gas cooled reactors
. . **high temperature nuclear reactors**
. . . high temperature gas cooled reactors
. nuclear research and test reactors
. . **high temperature nuclear reactors**
. . . high temperature gas cooled reactors
RT nuclear propulsion
reactor design
reactor technology
∞ reactors

high temperature plasmas
UF *hot plasmas*
GS particles
. charged particles
. . energetic particles
. . . plasmas (physics)
